New recombinant homologous 28 kilodalton immunodominant protein Ehrlichia canis, useful for treating Ehrlichia canis infections. Claim 5; Fig 16; 106pp; English.

from

The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28 (1) of Ehrlichia canis. (1), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting B. canis infection in a subject. (1) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. ABK68852-ABK68878 represent the 28-kDa antigen coding sequences and PCR primers of the

                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides isolated outer membrane proteins (OMP) from Ehrlichia chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAX06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAX06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs. (Updated on 27-AUG-2003 to correct OS field.)

The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Bhrlichia canis or Bhrlichia chaffeensis used the the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with B. chaffeensis. This sequence represents DNA encoding an Bhrlichia outer membrane protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of canis and E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotide 672 of ADA09764. Also disclosed are E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. chaffeensis outer membrane protein, for designing hybridiation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis sequence encodes an E. chaffeensis outer membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCTACTTATGCAAGCAGTTTTGCAGGGTTTAGTGGTATCATTGGATATTATGTTAATGAC 318

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     333
                                                                                                                                   The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia chaffeensis OMP DNA.
                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                    93

The invention provides isolated outer membrane proteins (OMP) from Ehrlichia chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel outer membrane proteins from Ehrlichia chaffeensis and Ehrlichia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               327 AGAATTTGAAGGTTCTTATGAGAATTTTGAACCTGAAAGACAATGGTACCCTGAGAATAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. Canis, or an antigenic fragment of the E. Canis p30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and B. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying CDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polympeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         215
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  350

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          791
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                827
                                                                                                        The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia chaffeensis OMP DNA.
                                  New polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis, useful in preparing a composition for diagnosing or preventing E. canis or E. chaffeensis infection.
                                                                                                                                                                                                                                                                                                                                                                                          GTCTATTACAGATATAACAACAAATAAAAATTCAACATTCCTTATAACACAAAATTTCA

(I), a 28-kba antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting E. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. ABK68852-ABK68978 represent the 28-kba antigen coding sequences and PCR primers of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 raicagróririgoagarcorgraggircaágaacraargaraacaaagaággorrorac

in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis. This sequence represents DNA encoding an Ehrlichia outer membrane protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of canis ancleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. chaffeensis outer membrane protein, for designing hybridiation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allalic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis sequence encodes an E. canis outer membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               171
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeenais used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis. This sequence represents DNA encoding an Ehrlichia outer membrane protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   171
                                                                                                                                                                                                                                                                              The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, tracting or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present

                                                                                                                   The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeennis outer membrane protein and their encoding nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present
